

CIMPAR MOBILE VACCINATION SERVICES

CIMPAR (Chicago Internal Medicine Practice and Research) is partnering with IDPH to bring mobile vaccination services to local health departments, schools, and community organizations.

WHAT WE DO

CIMPAR's mobile vaccination program is a fully inclusive service model designed to meet the immunization needs of communities across Illinois.

- Administration of vaccinations in schools, facilities, homes, or with the aid of mobile health vans.
- Management of all pre- and post-clinic tasks, including site coordination and scheduling, vaccine ordering and handling, portal registration with participant sign-up and consent management, and reporting.

Whether serving children, adults, or vulnerable populations, our mobile clinics are built to operate independently while ensuring full compliance with regulatory guidelines.
