RED SIFT

A data-driven cybersecurity company with a platform based on machine learning technology. We offer users essential, automated tools – from network monitoring to email analysis and authentication – designed to protect users and brand reputation.
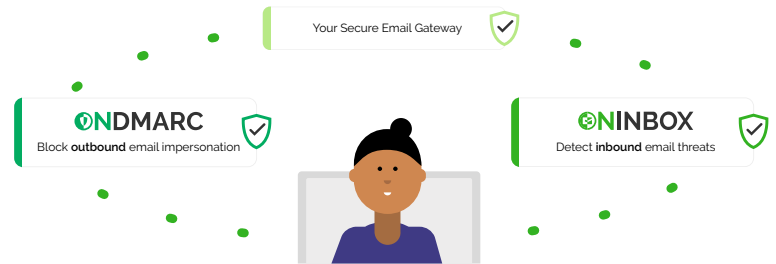

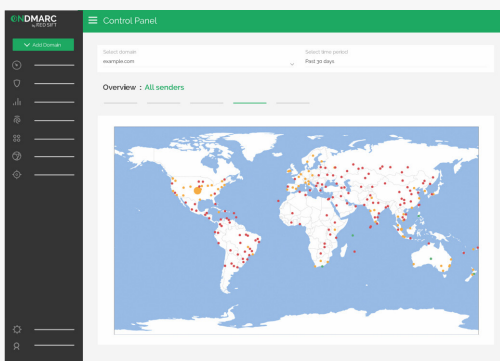

Essential business email protection by Red Sift

OnDMARC and OnINBOX create a full circle of business email protection, formerly known as 360˚ email protection. This suite blocks outbound email impersonation and detects inbound email threats for end-users.

Your Secure Email Gateway

ONDMARC
Block **outbound** email impersonation

ONINBOX
Detect **inbound** email threats

ONDMARC

Shut down domain fraud by blocking **outbound** email impersonation.

Powerful features

> *Dynamic SPF* - Get rid of manual DNS dates and overcome the 10 SPF lookup limit

> *Investigate* - Fast-track setup by verifying results in seconds

> *Threat Intelligence* - Quickly uncover and block bad senders

Key benefits

✓ See who is using your domain to send emails

✓ Block phishing attacks

✓ Increase email deliverability

✓ Shut down spoofing and domain fraud

ONINBOX

Protect employees with intelligent **inbound** email threat detection.

Compatible with Office 365 + G Suite

Powerful features

> *Customizable Warnings* - Alert users to risks using traffic light indicators and optional text-based banners inside every email

> *Natural Language Processing* - Advanced content scanning understands human intent, topics and if there's a sense of urgency

> *OnINBOX Manager* - A centralized view of organizational communications and email security

Key benefits

✓ Flag risks that bypass your secure email gateway and reach the inbox

✓ Immediate visibility of your suppliers and their associated email security

✓ Security teams can define and control an organizational Trust Network

✓ Email communications and their associated security form personalized Trust Networks that are automatically updated and accessible to every end-user.
